

Supplementary Figure 1. The changes of blood pressure and heart rates during head up tilt test. Δ SBP and Δ DBP are significantly greater in PD-OH(+). Δ SBP, the change in systolic blood pressure; Δ DBP, the change in diastolic blood pressure; Δ HR, the change in heart rate; HCs, healthy controls; PD-OH(-), Parkinson's disease patients without orthostatic hypotension; PD-OH(+), Parkinson's disease patients with orthostatic hypotension; mmHg, millimeters of mercury; min, minutes; BPM, beats per minutes.
