

**Supplement Table 1.** Factors associated with correct answers to questions on knowledge of PD in patients with PD

	Q1	Q2	Q3	Q4
Age	0.94*** (0.92–0.96)	0.95*** (0.93–0.97)	0.99 (0.97–1.01)	0.95*** (0.93–0.97)
Gender	1.03 (0.77–1.38)	0.95 (0.73–1.23)	1.07 (0.81–1.41)	1.16 (0.88–1.52)
Education	1.13*** (1.09–1.17)	1.11*** (1.08–1.15)	1.01 (0.98–1.05)	1.10*** (1.06–1.14)
<b>Diagnosis</b>				
PD plus vs. PD	0.67 (0.35–1.28)	0.44** (0.24–0.83)	0.40** (0.22–0.74)	1.49 (0.80–2.76)
Unknown PDism vs. PD	0.89 (0.43–1.81)	0.44** (0.22–0.85)	0.41** (0.22–0.80)	0.98 (0.49–1.94)
PD duration	1.12*** (1.07–1.17)	1.05** (1.02–1.08)	1.06** (1.02–1.10)	1.04* (1.00–1.07)
<b>Most-disabling symptom</b>				
Tremor	0.94 (0.69–1.28)	0.83 (0.63–1.09)	1.15 (0.86–1.54)	1.16 (0.88–1.54)
Rigidity	1.78* (1.08–2.96)	1.78* (1.17–2.70)	0.91 (0.60–1.38)	1.89* (1.27–2.81)
Bradykinesia	1.63* (1.10–2.42)	1.18 (0.85–1.63)	1.36 (0.95–1.94)	1.26 (0.90–1.76)
PIGD	1.07 (0.79–1.44)	0.95 (0.73–1.25)	0.72* (0.55–0.96)	0.68*** (0.51–0.91)
Others	0.65* (0.45–0.93)	0.75 (0.54–1.05)	0.88 (0.62–1.25)	0.74 (0.51–1.07)

Values are odds ratio with 95% confidence intervals in parenthesis. \* $p < 0.05$ , \*\* $p < 0.005$ , \*\*\* $p < 0.0001$ . Q1: Parkinson's disease is caused by a reduction in dopamine-producing neurons. Q2: Parkinson's disease is the same disorder as Alzheimer's disease. Q3: Parkinson's disease patients are improved by medical treatments including levodopa. Q4: Late complications of Parkinson's disease can be improved by the surgical treatment deep brain stimulation. PD: Parkinson's disease, Unknown PDism: diagnostic category of parkinsonism unknown, PIGD: postural instability and gait disturbance and falls, Others: other non-motor symptoms.
